Matrices

For 1-5, complete the matrix operation. If it is not possible, write "not possible". No Calculator.

1. 
$$\begin{bmatrix} 5 & 6 & 1 & 0 \\ 2 & -2 & 3 & 4 \\ 1 & 5 & -2 & 1 \end{bmatrix} - \begin{bmatrix} 1 & 4 & -1 & 1 \\ -2 & 0 & 5 & 8 \\ 10 & -3 & 5 & 7 \end{bmatrix} = \begin{bmatrix} 4 & 2 & 2 & -1 \\ 4 & -2 & -2 & -4 \\ -9 & 8 & -7 & -6 \end{bmatrix}$$

$$2. \ 4\begin{bmatrix} 3 & -1 \\ 2 & 4 \end{bmatrix} + \begin{bmatrix} 7 & 9 \\ -1 & 1 \end{bmatrix} = \begin{bmatrix} 12 & -9 \\ 8 & 14 \end{bmatrix} + \begin{bmatrix} 7 & 9 \\ -1 & 1 \end{bmatrix} = \begin{bmatrix} 19 & 5 \\ 7 & 17 \end{bmatrix}$$

3. 
$$\begin{bmatrix} 4 \\ 5 \end{bmatrix} \begin{bmatrix} 5 & 3 & -1 & 2 \end{bmatrix} = \begin{bmatrix} 2 & 0 & 12 & -4 & 8 \\ 2 & 5 & 15 & -5 & 10 \end{bmatrix}$$

4. 
$$\begin{bmatrix} 3 & 2 & -1 & 0 & 4 \\ 5 & 9 & -2 & -3 & 5 \\ 1 & 0 & -4 & -1 & 3 \\ 7 & 8 & 1 & 2 & 4 \\ 0 & -3 & 4 & -3 & 1 \\ 8 & 10 & -2 & 1 & 4 \end{bmatrix} \begin{bmatrix} 3 & 5 \\ 4 & -1 \end{bmatrix} =$$

$$\begin{bmatrix} 3 & 5 \\ 4 & -1 \end{bmatrix} =$$

$$\begin{bmatrix} 3 & 5 \\ 4 & -1 \end{bmatrix} =$$

$$\begin{bmatrix} 3 & 5 \\ 4 & -1 \end{bmatrix} =$$

$$\begin{bmatrix} 3 & 5 \\ 4 & -1 \end{bmatrix} =$$

$$\begin{bmatrix} 3 & 5 \\ 4 & -1 \end{bmatrix} =$$

5. 
$$\begin{bmatrix} 1 & 2 & 0 \\ 4 & 1 & -2 \\ 3 & 7 & -1 \end{bmatrix} \begin{bmatrix} 1 & 2 \\ 0 & 1 \\ 3 & 4 \end{bmatrix} = \begin{bmatrix} 1 & 0 \\ -10 & 1 \\ -6 & 9 \end{bmatrix}$$

For 6-8, determine if the inverse of the matrix exists. If it does exist, find it! (#6 and #7 No Calculator, #8 Calculator OK)

6. 
$$\begin{bmatrix} 2 & -1 \\ 4 & -2 \end{bmatrix}$$
  $det A = \lambda(-1) - (-1)(4)$  7.  $\begin{bmatrix} 2 & 3 \\ 4 & 5 \end{bmatrix} det A = \lambda(5) - 3(4)$  8.  $\begin{bmatrix} 4 & -1 & 3 \\ 2 & 1 & 4 \\ 5 & -2 & 0 \end{bmatrix}$  NO INVERSE  $A^{-1} = \frac{1}{-2} \begin{bmatrix} 5 & -3 \\ -4 & 2 \end{bmatrix} = \begin{bmatrix} -\frac{5}{2} & \frac{3}{2} \\ 2 & 1 \end{bmatrix}$   $\begin{bmatrix} -.53 & .4 & .47 \\ -1.33 & 1 & .67 \\ .6 & -.2 & -.4 \end{bmatrix}$ 

9. Explain in words how you would prove that two matrices are inverses of each other.

D Multiply the 2 matrices together to see if their product is Identity matrix. AB = BA = I?

OR (2) Find inverse of one matrix and see if it equals the other matrix,  $A^{-1}=B$ ?

10. Explain in words what the "identity matrix" is.

A square matrix that, when multiplied by a matrix of the same size, gives the given matrix.  $I = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$   $I_3 = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$   $I_3 = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$   $I_3 = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$   $I_3 = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$   $I_3 = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$ 

For 11-13, solve the system of equations using matrices (Calculator OK). You must use each method at least once (Inverses and Reduced Row Echelon Form).

11. 
$$2x-3y=-10$$

$$x+2y=16$$

$$\begin{bmatrix} 2 & -3 \\ 1 & 2 \end{bmatrix} \begin{bmatrix} X \\ Y \end{bmatrix} = \begin{bmatrix} -10 \\ 16 \end{bmatrix}$$

$$A \cdot X = B$$

$$X = A^{T}B = \begin{bmatrix} 4 \\ 6 \end{bmatrix}$$

$$X = 4 \quad y = 6$$

12. 
$$2x-3y+z=-5$$
  
 $3x+2y+4z=3$ 

RREF  $\begin{bmatrix} 1 & 1 & 1 & 2 \\ 2-3 & 1-5 \\ 3 & 2 & 4 & 3 \end{bmatrix} = \begin{bmatrix} 1 & 0 & 0 & 1 \\ 0 & 1 & 0 & 2 \\ 0 & 0 & 1 & -1 \end{bmatrix}$ 

So  $X=\begin{bmatrix} 1 & y=2 & 7=-1 \\ y=2 & 7=-1 \end{bmatrix}$ 

x + y + z = 2

$$x+y+z=-2$$
13.  $2x+z=-1$ 

$$3y+3z=-12$$

$$201-1 = \begin{bmatrix} 1 & 0 & 0 & 2 \\ 0 & 1 & -1 \\ 0 & 3 & 3 & -12 \end{bmatrix} = \begin{bmatrix} 1 & 0 & 0 & 2 \\ 0 & 1 & 0 & 1 \\ 0 & 0 & 1 & -5 \end{bmatrix}$$

14. Mrs. Billz has paper money in her wallet consisting of \$1 bills, \$5 bills, \$10 bills, and \$20 dollar bills. On Friday she had 19 total bills in her wallet that adds up to \$125. She also has one more \$10 bill than the total number of \$5 bills. The number of \$20 bills is equal to the number of \$5 bills minus the number of \$1 bills. How many of each type of bill does she have?

$$X = \# \text{ of } $1 \text{ bills}$$

$$Y = \# \text{ of } $5 \text{ bills}$$

$$Z = \# \text{ flo bills}$$

$$\omega = \# \text{ of } $20 \text{ bills}$$

ave?  

$$x + y + z + w = 19$$
 $|x + 5y + 10z + 20w = 125$

$$RREF \begin{bmatrix} 1 & 1 & 1 & 1 & 19 \\ 1 & 5 & 10 & 20 & 125 \\ 0 & -1 & 1 & 0 & 1 \\ 1 & -1 & 0 & 1 & 0 \end{bmatrix} = \begin{bmatrix} 1 & 0 & 0 & 0 & 5 \\ 0 & 1 & 0 & 0 & 4 \\ 0 & 0 & 1 & 0 & 7 \\ 0 & 0 & 0 & 1 & 1 \end{bmatrix} \begin{bmatrix} 5 & $1$ bills \\ 6 & $5$ bills \\ 7 & $10$ bills \\ 1 & $20$ bills \end{bmatrix}$$

15. The Gaussians Math team has made it to State! After they compete at State, they take home a total of 10 trophies (1st, 2nd, and 3rd place finishes in each event earns the team a trophy). The number of 1st place trophies is the same as the number of  $2^{nd}$  and  $3^{rd}$  place trophies combined. Also, the number of  $1^{st}$  place trophies is one less than twice the number of  $2^{nd}$  place trophies. How many  $1^{st}$ ,  $2^{nd}$  and  $3^{rd}$  place trophies do they take home?

$$a = \# \text{ of } 1^{st} \text{ place trophies}$$
 $b = \# \text{ of } 2^{rd} \text{ place trophies}$ 
 $a + b + c = 10$ 
 $c = \# \text{ of } 3^{rd} \text{ place trophies}$ 
 $a = b + c = 3^{rd} \text{ place trophies}$ 

$$a + b + c = 10$$
  
 $a = b + c \Rightarrow a - b - c = 0$   
 $a = 2b - 1$   $a - 2b + 0 = -1$ 

1-1-10 = 0103 3 2<sup>nd</sup> place trophies 2 3<sup>rd</sup> place trophies
