P6 Review of Complex Numbers

## P6 Complex Numbers

complex number :  $a + bi$

$a$  = real number

$bi$  = imaginary number

$$i = \sqrt{-1}$$

$$i^2 = -1$$

$$i^3 = i \cdot i^2 = -1i = -i$$

$$i^4 = i^2 \cdot i^2 = -1 \cdot -1 = 1$$

$$\sqrt{-64} = \sqrt{-1 \cdot 64} = 8i$$

$$\sqrt{-12} = \sqrt{-1 \cdot 4 \cdot 3} = 2i\sqrt{3}$$

$$\sqrt{-48} = \sqrt{-16 \cdot 3} = 4i\sqrt{3}$$

Adding / Subtracting / Multiplying Complex Numbers

$$\textcircled{1} (\underline{2} + \underline{3i}) + (\underline{5} - \underline{2i}) = 7 + i$$

$$\textcircled{2} (\underline{5} - \underline{5i}) - (\underline{7} + \underline{2i}) = -2 - 7i$$

$$\textcircled{2} \quad (\underline{5} - \underline{5i}) - (\underline{7} + \underline{2i}) = -2 - 7i$$

$$\textcircled{3} \quad (4 + i)(3 + 6i) = 12 + \underline{24i} + \underline{3i} + 6i^2 = -1$$

FOIL

$$= 12 + 27i - 6$$
$$= 6 + 27i$$

$$\textcircled{4} \quad (3 - 2i)(4 + 5i) = 12 + 15i - 8i - 10i^2$$

FOIL

$$12 + 7i + 10$$
$$\boxed{22 + 7i}$$

Multiplying by Conjugate

$$\textcircled{5} \quad (2 + 3i)(2 - 3i) = 4 + \underline{6i} - \underline{6i} - 9i^2$$
$$= 4 + 9$$
$$= 13$$
